Tomamoi VI medidos de nomina de tallos

20 21 20 19 25 13 21 22 25 30

 $\frac{20+22}{2} = 21$ $\frac{20+19}{2} = 125 \cdot \frac{26+77}{2} = 21$

 $\frac{21+22}{2} = 21.5$ $\frac{23+30}{2} = 26.5$

l'edia mustial

 $\frac{21 + 19.5 + 21 + 21.5}{4 + 26.5} = .21.9$

. dia Publiacional = 21.9

$$\hat{8} = \sqrt{\frac{20^2}{7}} = 0$$

Desnación estandas

$$\delta = \sqrt{\frac{(9+1.5)\cdot 9+.4+4-9}{10}} = \sqrt{2.7}$$

Mistribure, or de obiference de medial Separamos en des poblaciones 20+22+20+19-125 = 21.5=XI 17+21+22+33+30=22.5=12 $6i = \sqrt{(1.5 + 5 + 1.5 + 1.5 + 2.5)^2} = 3.3 = 6i$ 62= \((5.5 +1.5+.5+.5+7.5)\\ = 6.91=62 Z= (21.5-22.5) - (MI-M2) = 0

 $\sqrt{\frac{3.3^2}{5}}$ + $\frac{6.9^2}{3}$

Distribution du proporciones

Tomomo) 4 absenaçõemes de 6 $\frac{4}{6}$ y $f = \frac{1}{10}$ f_0 . lo que $z = \frac{4}{6} - \frac{7}{10} = 0.02$
